

Jobs Assignment

John H. Sargent III

Educational Technology Department, New Jersey City University

EDTC 8089031 Summer Institute II

Dr. Dana Mason

August 20, 2024

1) Assistant Engineering System Operator - Implementing documentation control for the engineering department, understanding the power distribution system, and understanding (Positive train control PTC). Dispatching duties include working with all departments including Maintenance of Way, Electrical Traction, and Structures. Office duties include understanding different software applications including Microsoft Office. Understanding the design and manipulation of database structure to document and report railroad activities. Maintain safety report log and investigate all safety issues. Communicate with other railroads pertaining to power outages. Must be tentative to all weather reports and advise senior management on the factors that might affect train movement. Must have a minimum of an associate degree in electrical engineering, (Transportation Industry).

I'm a strong candidate for this position because of my railroad experience and formal education. The reporting structure is mentioned in the advertisement. This job is interesting because I cover all the requirements to be considered for an interview.

2) Assistant Manager - Fire Protection Systems inspect, troubleshoot, repair, and maintain fire control systems. Budget control for said systems. Assist with negotiations and rewarding contracts with the fire control systems. Understanding all fire codes.

Documentation control of all fire-related safety duties including all test procedures.

Training of all railroad personnel on yearly certifications. Developed training materials for classes related to fire prevention and hazardous material instruction. This job is interesting because of my Navy fire training and railroad experience. The reporting structure states

Senior management. The education needed is a Bachelor's Degree in Engineering or a related field, (Transportation Industry)

3) Account Manager, lead person for a Robotics firm handling the financial sales end of a fast-moving industry. Building relationships with customers to satisfy their needs. The liaison between customers and maintenance engineers. I can be a strong candidate for this position because of the robotic experience I have working with IBM semi-conductor building engineering department. My formal education allows me the ability to communicate with customers in a sufficient manner. The reporting structure is described as upper management, (Technical Robotic Industry).

4) CNS is looking for an Aerospace engineer to help in the design of robotics which incorporates artificial intelligence in the aerospace industry. Creates aircraft technology. Drones that can paint and drill work. My interest here is with the technology. Because I worked in the aerospace industry, I think I can do well if I'm interviewed for a position with CNS. The job ad doesn't mention a reporting structure, (Aerospace Industry).

5) Software engineers at Rosonate Science are needed in the field of robotics to contribute to an intricate coding scheme. Designed to accomplish making robots that interact with humans. Computerized systems control the inner workings of the robots, making ideas for tasks that help humans in everyday life. My robotic and software engineering experience makes me suitable for this position. No reporting structure is mentioned, (Robotics Industry).

6) Computer Scientists are welcome to apply for a position at Adobe for research ideas that apply knowledge to create efficient applications on a large scale. At least a bachelor's degree is needed. This position will help develop artificial intelligence to interact proficiently and work side by side with humans. The would be a nice position because of my interest in artificial intelligence. No organizational structure is mentioned, (Robotic Industry).

7) A system engineer is needed with a PhD to oversee software development aspects of constructing transportation systems. Raytheon autonomous systems track and control vehicle operation. A job like this will interest me in the future. The position doesn't mention reporting structure, (Transportation Industry).

8) EUV needs a PhD Research Science to perform in the field of medicine and computer science. System-level generation of light source technology. Responsible for the production plasmas to help the path of EUV power. The type of job in what I'll might be looking for in the future. Because of my technical background an experience this type of job suits me. No reporting structure was mentioned, (Medicine and Computer/informatics Industry).

9) Electronic test Engineer at Advance Motor Control familiar with testing equipment, Voltmeters, Ammeter, Oscilloscope etc. At least 4 years of writing code for test routines. You will be on the front line of a fast-moving organization, doing fully automated testing of

electronics around the world and in space. Servo drives interfacing with EtherCat and RS-485. The test engineer will also be responsible for the development of software routines for the testing environment. Reporting structure not mentioned. My experience makes me suitable and interested in this position. (Technology Hardware and Software Industry).

10) Uline wants a senior Operation Analysis to guide, develop, and manage projects.

Summarizes data and recommends operational changes. Understanding of performance indicators and operational issues. This job interests me because of the opportunity to use and establish an authentic leadership role in this organization. No reporting structure was mentioned, (Service Industry)
